**BLACK MASKING MATERIAL  
 SOUND 2000M  
 DATA SHEET**

Document Ref DS-020 Issue 3 June 2006

Sound 2000M is an acoustically transparent black masking cloth with excellent light absorption properties. It is the ideal choice for installations where high quality sound is required in situations where behind screen peripheral speakers will be covered by masking material.

The reduced attenuation of Sound 2000M will make a significant improvement to auditoria sound, particularly at higher frequencies, when compared to a regular Black Wool Serge.

**Application**

Typical cinema and theatrical applications include static or moving side, top and bottom masking systems and stage drapes.

- where behind screen speakers are covered by moving masking systems or drapes
- where speakers require positioning directly behind stage drapes
- where an existing or possible acoustic resistance occurs

**General Detail**

**Material Description** Brushed Cotton Druot having one smooth face and one coarse face

**Material Construction** 100% cotton

**Weight** 136g/m<sup>2</sup> (0.028lb/ft<sup>2</sup>)

**Fire Retardant**

**Code compliance includes:** BS 5867 : 1980, Part 2 Specification for Fabrics, Curtains and Drapes

**Colour** Black

**Seaming** Commercial stitch

**Size** Roll width 2.6m (8' 5"), Roll length 50m (150')

**Performance Comparison**

The tables below compare Sound 2000M with regular black wool serge using double thickness to simulate the conditions of folded masking.
