

COMPACT-VIEW

The Desktop Screen from Harkness Screens

The Compact-View desktop screen from Harkness Screens is a superb compact, lightweight tabletop presentation screen that is quick and easy to set up.

Just fold out the integral legs and pull apart the case to reveal the screen, making it ideal for mobile presentations. Perfect for use with the latest compact, lightweight video projectors.

The case legs make the screen extremely stable and protect the surface on which it is placed. The Compact-View comes in two image sizes: 40-inch and 50-inch diagonal in native 4:3 ratio and uses a Matt White surface suitable for wide angle viewing. The matt black case, and the black borders to top and bottom of the screen, frame the image.

Weighing only 1.1kg and being just over 2 feet long (65cm) when closed, the Compact-View is ultra-portable for small group presentations.
